

TYPE

Waterborne, epoxy modified phosphoric acid ester

Neutralization agent

approx. 8 % N.N-dimethylethanolamine, as salt

FORM OF DELIVERY (f.o.d.)

50 % in water (50WA)

PRODUCT DATA

Determined per batch:

Dynamic Viscosity DIN EN ISO 3219

dynamic viscosity (10 1/s; 23 °C)	[mPa.s]	1000 - 8000
--------------------------------------	---------	-------------

pH-Value DIN ISO 976

pH-value adjustment of pH value with N.N-dimethylethanolamine (10 %)		6,8 - 7,6
--	--	-----------

Non-Volatile Matter DIN EN ISO 3251

non-volatile matter (1 h; 125 °C; 1 g)	[%]	48 - 52
---	-----	---------

Not continually determined:

Colour / Appearance VLN 250

colour		colourless to slightly yellow
--------	--	----------------------------------

Density (Liquids) DIN EN ISO 2811-2

density approx. (20 °C)	[g/cm³]	1,12
-------------------------------	---------	------

Flash Point (Pensky-Martens) DIN EN ISO 2719

flash point	[°C]	> 100
-------------	------	-------

SPECIAL PROPERTIES AND USE

Resydrol VAX 5538w/50WA in combination with water-dilutable melamine resins (preferably hexamethoxymethylmelamine grades) is recommended as modifier resin for waterborne primer-surfacers to improve adhesion (e.g. to PVC) and corrosion resistance.

Addition of Resydrol VAX 5538w to melamine crosslinking waterborne enamels can lead to increased reactivity, in some cases even to embrittlement of the coatings.

STORAGE

At temperatures up to 25 °C storage stability packed in original containers amounts to at least 365 days.

Synthetic resins containing water may freeze or get inhomogeneous at temperatures below 0 °C. By this the product will not suffer any damage, but the necessary regeneration requires extended heat treatment at 40 - 50 °C with continuous stirring. It is therefore recommended to ensure frostproof storage of such products.

Lowest storage temperature: 0 °C
